

# giSTT™ Hosted

## Never Log Into Voicemail Again!

Mutare's giSTT Hosted speech to text service delivers voice messages as text to email. Now available for small to medium sized businesses.

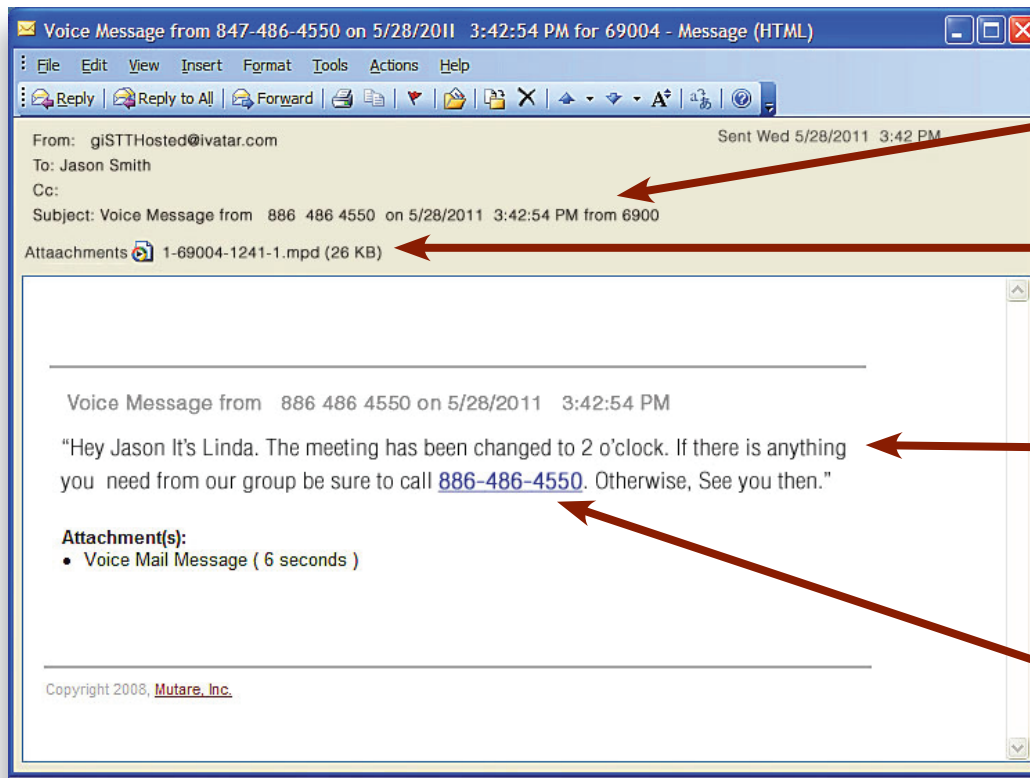

“ We’ve gotten rave reviews about the new tools that have been provided, especially from our ‘power users’ in the field, who really appreciate speed and efficiency for both their incoming and outgoing communications. Overall I’d estimate that we have increased productivity of our people in the New York area by at least 15%.”

Craig Cuyar, CIO  
Cushman & Wakefield

## What is giSTT™ Hosted?

Mutare's giSTT Hosted is an enterprise voicemail-to-email transcription solution designed for the small to medium sized business. giSTT Hosted does not require a dedicated on-premise server or related software, and works with any voicemail system capable of forwarding a sound file in email. Users simply set their voicemail to forward to the cloud-based giSTT Hosted service and begin receiving their voicemail messages, converted to text, in their email inbox.

## What to Expect

giSTT Hosted is designed to deliver a reasonable approximation of the voice message. In most cases,

users should be able to act on the message without needing to listen to the audio. They can still listen to the original voice message by clicking on the audio attachment if needed.

## Benefits

- Fast: Read and process voicemail information in a fraction of the time it takes to listen;
- Efficient: Promotes uninterrupted work flow and closer collaboration so businesses run better;
- Affordable: Costs less than \$1 per week per user while saving them approx. 1 hour per week in voice messaging time, without the added cost for hardware, software, or staff.

## About Mutare

Mutare is an independent software developer driven by a passion to make information access easier.
