Mutare EVM with Speech to Text Earns Avaya Compliance for IA770, Intuity LX

Speech to Text, a revolutionary new offering from Mutare Software and partner company, SpinVox, recently earned "Avaya Compliant" certification for CM 5.0 with the IA770 and IALX messaging platforms. First rolled out in November, 2008 for Avaya Modular Messaging, Speech to Text was subsequently tested and confirmed interoperable with Intuity systems and is now available for all Avaya messaging platforms that support Internet Messaging.

Speech to Text deliver a unique solution that converts voicemail to text and delivers it in an email message to the user inbox. Users of Speech to Text report a dramatic reduction in voicemail management time with improved customer responsiveness and collaboration.

Among the first enterprise users of Speech to Text was iStar Financial, a multi-billion dollar international commercial real estate company with 14 major offices worldwide.

"I hear on a daily basis about how much time our users are saving now that they can read their voicemail messages," notes Jaime King, iStar telecom specialist. "I believe the greater benefit, though, is to our customers. In a market as volatile as international commercial real estate, any tool that helps close gaps of time between communications could make the difference between a successful transaction and a missed opportunity.

Speech to Text makes us more responsive, and that has a direct impact on our bottom line as well as that of the clients we serve.”

Earning Avaya Compliant certification is one more way that Mutare Software brings to its customers best-in-class solutions that add increased value and functionality to their existing networks while assuring quicker deployment and lower implementation costs.

In addition to Speech to Text, other Mutare applications that have earned the Avaya Compliant designation include Enabled VoiceMail (EVM) and Enterprise Notification System (ENS).
