

<b>MSS Password Reset for AD Pre-Installation Checklist</b>	<b>Document #: 218</b>
	<b>Last Update: 04/27/2010</b>
	<b>Page: 1 of 2</b>

## Overview

This form provides Mutare with information about the corporate Active Directory and SMTP service needed to configure the self service MSS password reset for Active Directory web scripts.

## Site Configuration

Site Information	
Site Name	

Application Server Configuration Options	
Ensure that World Wide Web Server on the Application Server has been installed. <sup>1</sup>	Complete? <input type="checkbox"/>
Ensure that SMTP Virtual Server on the Application Server has been installed. <sup>2</sup>	Complete? <input type="checkbox"/>
Corporate SMTP Server (IP address or Host Name). Emails will relay through this server – unauthenticated.	
Windows account and password with Administrator rights to the local machine.	

Modular Messaging Configuration	
Message Store Server (MSS) IP Address:	
The LDAP default port is 389. If the MSS is using a different LDAP port, identify here.	LDAP Port 389?    Yes    No    (Circle one) LDAP Port if not 389: _____
Ensure that the Application Server has been configured as an LDAP Trusted Server on the MSS.	Complete? <input type="checkbox"/>  Server Name: _____ Password: _____
MM pilot number (number to check voicemail from outside your organization).	
Create a test mailbox and password to use during installation to confirm the application.	_____ Test mailbox number _____ Test mailbox password

Each active directory is set up differently. These questions tell us how to find the mailbox in the directory. Examples are provided for each question.

Active Directory Configuration	
What is LDAP Server's IP/host name and port? <b>corp.abc.org on port 389</b>	
What is the bind DN and password? <b>cn=svcmutarebind,ou=svccaccounts,ou=abcspecialaccounts,dc=abcmaster,dc=abc,dc=org</b>	

<b>MSS Password Reset for AD Pre-Installation Checklist</b>	<b>Document #: 218</b>
	<b>Last Update: 04/27/2010</b>
	<b>Page: 2 of 2</b>

What is the base DN to search for users? <b>ou=abccusers , dc=abcmaster , dc=abc , dc=org</b>	
What target attribute should users be searched on? This is like a field in the data store that matches the SSO ID or other employee identifier. Provide a live example. <b>sAMAccountName , kvine1</b>	
What is the name of the attribute for a field that contains the user's voice mailbox? How many digits represent the mailbox? <b>otherTelephone , 7 digits</b>	
What attribute contains the user's email account where we can send results to? <b>mail</b>	
What attribute contains the user's name for logging purposes? <b>displayName</b>	

<b>Website Configuration</b>	
What email address would you like the reset notifications to come from (e.g. voicemail@abc.org)?	
Organization Logo – Please send an organization logo to be used for the Password Reset website with this completed document. Send as .gif, .png, or .jpg file. Also, please provide the URL of your organization's website so that the fonts and colors can be matched.	Complete? <input type="checkbox"/>  URL: _____

<sup>1</sup> Mutare will create a new folder for the Web scripts and make it the default. Users will access Password Reset by entering the IP address or host name of the Application Server. For more information, see Mutare document 130-Web Server.

<sup>2</sup> The application sends confirmation of password reset email through an SMTP server. After installation, Mutare Software will configure the SMTP Virtual Server to use your existing SMTP server as a "smart host". This will allow the Application Server to relay messages through your existing SMTP server. Your existing SMTP server must be configured to allow relaying. For more information, see Mutare document 129-SMTP Server.
