

# giSTT Hosted™

## Datasheet

# Read Your Messages

## What to Expect

Our giSTT Hosted speech to text application allows subscribers to read, prioritize, save, forward and file converted voice messages with the same ease and convenience of email, and in a fraction of the time compared to traditional voicemail. You can still listen to the original voice message by clicking on the audio attachment if needed.

Administrators love to work with giSTT messaging because it is a clientless application with low overhead costs, and has a simple web based interface for easy administration.

## Deployment Options

The giSTT application can be deployed on premise or in the cloud, and is currently offered through the following services:

### giSTT Auto

- Fully automated in the cloud service for speed and economy

### giSTT Enterprise

- Fully automated behind the firewall service

## Key Features

- **Rapid ROI:** Significantly reduces time spent managing voicemail.
- **Flexible** Works with virtually any email system and Internet-enabled device.
- **Efficient** Converted messages can be saved, forwarded, or appended just like email. No more jotting down notes and phone numbers!
- **Responsive** Instant call back with a touch on your smartphone.
- **ADA Compliance** Provides hearing-impaired employees with equal access to voicemail.

## Requirements

Works with virtually any enterprise voicemail platform that can send a voice message .wav file to email, including Avaya, Cisco, Nortel, AVST and Mitel. On-premise giSTT Enterprise solution requires additional server(s).

**Caller ID in header info**

**Optional audio file attachment**

**One-touch callback from smartphone**

**Text conversion of voice message**

Sample speech to text delivery, above. Some names and words may not translate perfectly, but the message provides enough information to “get the gist” and act without listening.

*We’ve gotten rave reviews about the new tools, that have been provided, especially from our ‘power users’ in the field, who really appreciate speed and efficiency for their communications. Overall I’d estimate that we have increased productivity of our people in the New York area by at least 15%.”*

*Craig Cuyar, CIO, Cushman & Wakefield*
